

Bright Coffee Shop Sales Analysis Presentation

Prepared by: Constance Mokgadi Lekoloana
Date: 01 July 2025

***Business Insights for a New CEO on the
sales performance for Bright Coffee
Shop.***

Introduction

This case study analyzes transactional sales data from Bright Coffee Shop between January and June 2023, following the appointment of a new CEO focused on revenue growth and product performance. The findings, analysis and recommendations will be outlined in the next slides.

Objective

The goal of this analysis is to understand how products, customers, times of day, and stores are performing, so we can see what's working well and what needs improvement. This will help guide decisions to grow the business.

Analysis

Sales performance per Store Location

ASTORIA
33,23%

HELL'S KITCHEN
33,84%

LOWER
MANHATTAN
32,94%

The sales performance across the three store locations; Astoria (33.84%), Hell's Kitchen (33.23%), and Lower Manhattan (32.94%), shows a very narrow variance of less than 1%. This reflects consistent performance across all store locations.

Analysis

Product Category sales per Store Location

Coffee is the top-selling product category across all three store locations, making up over 38,63% of overall sales across all stores, Packaged Chocolate consistently performs the weakest, contributing less than 0,63 % towards the revenue.

Analysis

Daily Sales trend per month

The graph above shows that the best time of day for sales is the morning, which accounts for .1% of total sales across all months. Afternoon follows with 29.8%, then evening with 18.6%, and night has the lowest sales at only 0.4%. The trend clearly shows that sales are highest in the morning, followed by afternoon, evening, and lastly, night.

Analysis

Top Four Selling Product Type

<i>Product Type</i>	<i>Sales Percentage</i>
<i>Barista Espresso</i>	13,08%
<i>Brewed Chai tea</i>	11,03%
<i>Hot chocolate</i>	10,36%
<i>Gourmet brewed coffee</i>	10,02%

The four products make up more than 44% of total sales, showing they are the main source of income. The high sales suggest that customers really enjoy premium and special drink options. And low-performing product types such as Green Beans, Organic Chocolate, and Sugar-Free Syrup, which contribute less than 1% to total sales.

Analysis

Total Sales by Spending type

The graph above shows that the most contributor towards the sales are the medium spenders, contributing 79% towards the revenue, while the other spending types combined contribute 21%.

Analysis

Monthly sales per Store Location

From January to June, the three stores made a total of R698,812.93 in sales. Hell's Kitchen had the highest sales at 33.85%, followed closely by Astoria and Lower Manhattan. Sales went up each month, with June being the busiest month and January and February the quietest. All three stores more than doubled their sales over the six months, showing good and steady growth.

Findings

The analysis revealed both positive and negative findings, highlighting key strengths to build on and areas that need improvement. Below is a summary of these insights:

- Coffee is the dominant product, making up over 54% of total category sales at each location.
- Medium spenders contribute nearly 84% of revenue—making them the key revenue source.
- Night-time sales are insignificant (only 0.4%), while mornings drive over 52% of total sales.
- Sales are evenly distributed across stores, showing consistent performance (<1% variance).
- All stores show 100%+ sales growth from Jan to Jun, showing a strong upward trends.
- Products like Barista Espresso, Brewed Chai Tea, and Hot Chocolate are the top performers.
- Items such as Green Beans, Organic Chocolate, and Sugar Free Syrup contribute less than 0.5% each to overall sales.

Recommendations

Based on the findings from the analysis, the following recommendations are proposed to enhance performance, address areas of concern, and maximise opportunities for growth.

- Drive sales of high-performing products such as Barista Espresso, Chai Tea, and Hot Chocolate by offering combo deals and customer loyalty rewards.
- Consider phasing out or bundling slow-moving products like Green Beans and Organic Chocolate with popular items to increase visibility and improve sales turnover.
- Prioritise customer retention and reward strategies targeting medium spenders, who contribute the most to overall revenue.
- Design targeted campaigns to increase spending by low spenders through personalised offers and “spend more, save more” promotions.

Recommendations (continued)

- Expand morning specials, such as early bird promotions or breakfast bundles, since morning trade accounts for over 50% of total sales.
- Assess the need to reduce staffing during night shifts or use that time for pre-orders, stock preparation, or restocking, due to minimal sales activity at night.
- Keep the current store performance strategy in place, as all stores are performing consistently and no immediate changes are required.
- Encourage store-level innovation and closely monitor performance over the next six months to detect early signs of change or emerging trends
- Investigate the low number of very high spenders by reviewing pricing, rewards, and product relevance for this customer group.

Conclusion

The sales analysis shows that overall performance is strong, with steady growth at all stores and high sales from coffee products. It also gives useful insights into how customers spend and when they buy. There are clear strengths, like strong morning sales and popular products, but also areas that need attention, such as slow-selling items and low sales at night. The findings and recommendations can help guide better decisions to keep the business growing.
